AutoCAD uses Windows Graphics Device Interface (GDI) for all graphical output. The software runs on Windows, DOS, OS/2, and IBM iSeries-compatible operating systems. Microsoft Windows 3.x, Windows 95, and later versions of Windows use a windows device driver interface (WDM) that is capable of rendering hardware devices such as printers, plotters, webcams and scanners. AutoCAD has a WDM and a host driver capable of rendering a virtual printer. In AutoCAD 2010, the default GDI and WDM mode of rendering is the same, and both support hardware-accelerated rendering. In AutoCAD 2013, this is still the case, with one major exception: With GDI, printing (document printing) is supported in WDM mode, whereas with WDM, printing is only supported in GDI mode. The choice between GDI and WDM printing is made when the GDI or WDM mode is selected from the Printing options dialog box. Software architecture AutoCAD is a large and complex system composed of hundreds of different software components.
