

* "We tested a number of ways to incorporate player data into our gameplay, but HyperMotion Technology was the best solution for FIFA." – Ian Bell, Co-Creative Director "I think the central premise of HyperMotion Technology is to really recreate the intensity of a real-life football match," said Chris Taylor, Senior Producer. "For fans of the game and people who watch football on TV, this will be a very immersive experience." New "Digital Rivals" Game Mode 11 players from the real world will be selected to play against 11 players from the virtual world in "Digital Rivals" Mode. Previously released 'Create a Team' Mode is now 'Create a Nation', allowing fans to create a brand new nation and upload the nation's home kit before challenging their rivals to compete for the title of world champion. "Matchday" allows fans to choose to sit in the dugout or in the stands with supporters from their own country, and customise the playing surface, stadium and players. Gameplay Technology New "Touch and Skill" physicality system offers an unprecedented level of player individuality and realistic controls. Player collisions change and players react to head hits as well as ball touches. New Player Attributes FIFA 22 brings over 200 new player attributes to life, including stance width, speed, acceleration, jump, control, physicality, mobility and more. Up to 20 players can be on the field at once, giving the player count a consistent, realistic feel. New Artificial Intelligence FIFA 22 introduces completely new, realistic AI into the game. The AI will make decisions based on the rules of the game and the team's performance in previous matches. FIFA 22 – The Match Day Experience On FIFA.com, fans can create their own custom-made career mode schedule, creating and managing fantasy teams from the world's best players. Additional New Features New 16:9 Panorama Viewing on PC and PlayStation 4 Experience the game in a brand new panoramic view on PS4 and PC. What's new in Fifa 22:

- **Football modes** -...A complete overhaul, focusing on enhancing player traits and improving the movement. Player movements are based more on player's actual body and how close you are to the player will effect the type of movement you will get. The animations can be filtered, sped up, slowed down or recreated in any manner you desire.
- **Player Traits**
 - **FIFA 22 introduces renowned player traits/skills.**
 - **Altitude**
 - Increased altitude hurts the ball less on a player.
 - It delays players' starts (reaction is slower)
 - It makes tackling easier.
 - It also affects long passes.
 - But it delays recovery from head-to-head contact due to greater acceleration and faster brake.
 - When player is closer to the ball, player's passes have better quality and no acceleration or brake.
 - When a player hits the top of the Altitude cone (the above cone), the player takes longer to recover.
 - At corners and free kicks, ball is thrown more behind him.
 - It raises player's end-point heading accuracy beyond any other ball direction.
 - 8 yard passing is faster.
 - Accuracy during the last 10 yards is rated by a massive 0.5 pts.
 - Passing very close to the player is a bit more accurate.
 - Accuracy all the way up the cone is rated 0.25 pts higher than the same ball direction below the cone.
 - **Clear Cut**
 - Player enters the opponents field with a better view of the ball.
 - Dribbling is more dangerous.
 - A stronger pass due to increased drag, which raises the accuracy for rolling around the player.
 - The player can pass the ball while holding out his arm.

FIFA is a video game franchise based on the association football rules. The series includes both the FIFA franchise and its spin-offs, as well as a number of mobile games. Throughout the series, there have been two main goals: to provide players with a realistic football experience and to create the most authentic football game possible. This is done through the combination of many different functionalities that have proven successful in the past. One of the most important elements of all the FIFA games is the match engine. It is used to decide which direction the ball will move in and which team will get the ball next. The accuracy of decisions by the game engine directly affects gameplay. Players can play matches in three different types of matches: El Clasico: Two teams who have played each other a few times before. North American Cup: One team against a few opponents in a best-of-three format. World Cup: One team against the other teams in the qualifying rounds, with the winner getting to play in the World Cup. Head to head: One team plays against the other in a best-of-three format. Story Mode: Choose a team and make an attempt to win the World Cup. Quick Game: Play a quick game against someone of a similar skill level. Single Player: One player against the game engine. Player Career: Become a professional footballer and play a whole season in one of the several modes. My Career: Choose a team, compete in the World Cup and try to keep your place in the starting eleven. Online: Play a series of matches against other players. Global: Online service where you can play matches all around the world. Create a tournament: Go online and play against your friends. Watch a match: View the matches of two or three teams live. Every single detail is present in the game engine and each match is played the same way every time. The game engine does all the hard work and is much more important than any other element. There are three goals of the game engine: The ball must always be where the player is. Every action by a player must be accurate. The game flow must feel natural. The game engine in FIFA 11 was a breakthrough. It became possible to consider the game engine to be an integral part of the game and there
